

March 30, 1964

Professor Joshua Lederberg
Department of Genetics
Medical School
Stanford University
Palo Alto, California

Dear Joshua and Esther:

I enjoyed very much my visit with you and thank you very much for all favors. It was as the "old days" of Madison and which one cannot often return. I look forward to another visit if that is possible.

I will let you know how the analysis of the intermediates in carbohydrate uptake progresses and whether I get to a stage to utilize your mass spectrograph and its "attachments", and also of the lipid analysis of membranes of wild type and transport defective mutant.

I left Stanford without seeing Yanofsky as I felt that the schedule was tight for both of us. I did visit the lab and meet a couple of his people who helped steer me to the airport. Perhaps I can see him next trip.

Best wishes,

M. L. Morse, Ph.D.
Associate Professor of
Biophysics
